2RK66 spring wire

is a high-alloy austenitic stainless steel of '904L' type for use in severe corrosive environments, including environments with high chloride content and acids. The grade is recommended for springs which will operate in extremely corrosive conditions.

Service temperature: -200 to 300 °C (-330 to 570 °F)

Delivery Forms

- Standard delivery forms are:
- Coils with weight up to 150 kg
- Spools of various types with wire weight up to 1,000 kg
- Compact coils with weight up to 1,200 kg
- Straightened lengths up to 4 m

Standards

- ASTM: 904L
- UNS: N08904
- W.Nr.: 1.4539
- SS: 14 25 62
- BS: 904S14

By tempering the tensile strength can be increased by 100 MPa (15 ksi). Please click on heat treatment for further information. The tensile strength variation between spools/coils within the same production lot is maximum ± 50 MPa (7 ksi). The tensile strength values are guaranteed and are measured directly after production. At storing the strength will increase somewhat due to ageing. Depending on storing condition the ageing can increase the strength with 0 - 50 MPa (0 - 7 ksi).

Shear modulus, MPa (ksi)

As delivered	approx. 69,000 (10,005)
Tempered	max. 71,000 (10,295)

Modulus of elasticity, MPa (ksi)

As delivered	approx. 180,000 (26,100)
Tempered	max. 185,000 (26,825)

The strength will decrease by 3 – 4 % per 100 °C (184 °F) increase of service temperature.

Straightened lengths

After straightening the strength is approx. 7 % lower.
